

WoodPal®

OIL BASED SEMI TRANSPARENT STAIN
FOR DECKS AND SIDING

Organic

OIL BASED SEMI TRANSPARENT STAIN

- Solvent Free
- No V.O.C.'s (Volatile Organic Compounds)
- Neutral Carbon Footprint
- 100% Renewable Natural Oils and Beeswax
- Proven Durability of Linseed and Tung Oils

 CONSOLIDATED COATINGS

TINTING GUIDE

WoodPal is a Semi Transparent Stain and is to be tinted only to Semi Transparent Colors.

Colorants should be a "Universal" type that are compatible with both solvent and water based paints.

WoodPal is available in a single tint base. This base is short filled to allow the addition of a small amount of colorant.

Any color formula you have that calls for a clear base or accent base will work in this base and will be the same color as it would be in any other stain.

If you are custom tinting try to keep the colorant load around 1 fluid ounce for a "Natural" shade and around 2-3 fluid ounces per gallon for an "Effect" color.

In any case do not introduce more than 5 fluid ounces per gallon.

NOTE

Most colorants contain V.O.C.'s (Volatile Organic Compounds) and will change the status of WoodPal from a zero V.O.C. to a very low V.O.C. Some states allow the use of the term "zero" or "very low" V.O.C. when the amounts are below 50 grams/liter.

It's unlikely that the small additions of colorant mentioned above would exceed 50 grams/liter of V.O.C. per liter in the tinted gallon can.
